

Product Release Notes – July 2017

Loyalty

Membership Expiration

For clubs that use membership expiration, the short term solution was developed using:

- A script to tag members whose membership expiration date has passed—which is only executed for selected businesses
Note: This requires you to limit all smart automations, smart gifts and smart club deals only to members who do not have the “membershipExpired” tag
- A new smart automation action—Update Expiration Date—that allows you to automatically set a member’s expiration date when they join the club or updated when they renew their membership by purchasing a membership item (by yearly increments)

Note: Since this short term solution can only support a nominated number of businesses, the guideline is not to onboard new businesses that have membership expiration before we will release the full solution.

Platform – Usability

New Permissions

New permissions were added to support the Como Sense Express plan. The permissions allow you to limit a user to:

- certain home screen layouts
- certain smart actions (by smart automation or filter)
- no point/credit accumulation action for old automations and filters
- no access to certain sections of the “Point/Credit Settings” page
- certain button (generic) actions in their app
- certain actions in the birthday automations
- no side menu navigation type
- certain triggers for old and smart automations
- certain discount types for smart gifts/club deals
- no “Filter Branches by Distance” ability for Locations
- no “Export Results by” for Filter Members

Bugs

- [CNP-6504](#) 'My activity' page isn't loading
- [CNP-6502](#) Filter Members - Filter by Expiration Date not working
- [CNP-6498](#) Aborted in api and app version in case of bulk operation from the hub
