Welcome messages catered to Non Members and Members.....	7
PNG support transparent background.....	7
A more compact tile widget with up-to 5 icons.....	8
New Purchase history screen.....	8
Bug fix.....	9

## Apptext for User's Name

Add Apptext to the Profile Widget to make it more personalized.

Three new text options were added to the Override App Text that allow us to customize the text in the profile widget for the first name, last name and the main identifier.

`UserProfileTC.ProfileWidget.firstNameString`

`UserProfileTC.ProfileWidget.lastNameString`

`UserProfileTC.ProfileWidget.mainIDString`

- You can fill them with empty space or a custom message.

The image shows two side-by-side screenshots. The left screenshot is a mobile app interface with a yellow header and a grey profile widget. The widget displays a greeting: "hello - Amit Levi - yessss" followed by a phone number "turn to the cashier with that - 0503698643". Below the greeting are four icons representing "Pointssssst", "Credit!", "Gift List!", and "Cardst", each with a "0" above it. The right screenshot is a configuration screen for the profile widget. It has a search bar at the top with the text "UserProfileTC.ProfileWidget". Below the search bar is a preview of the widget's text: "hello - #\${FirstName#". A blue "Save" button is positioned to the right of the preview. The configuration screen lists three string codes and their corresponding default text values:

String Code	Default Text
<code>UserProfileTC.ProfileWidget.firstNameString</code>	<code>#\${FirstName#</code>
<code>#\${LastName# \n - yessss</code>	
<code>UserProfileTC.ProfileWidget.lastNameString</code>	<code>#\${LastName#</code>
<code>turn to the cashier \n with that - #\${MainIdentifier#</code>	
<code>UserProfileTC.ProfileWidget.mainIDString</code>	<code>#\${MainIdentifier#</code>

## New Widget format: Carousel

From Content tab → Layout → Home Screen (NEW) → Carousel Widget.

Create a layout block → Create a tile widget or choose an existing one → from the home screen page select Carousel Widget and add the relevant tile widget.

## Catalog Page with more layout options

Three new options were added to the Catalog list Layout.

Choose how many items do you want to display in a row (3/4/5):

From Content tab → Information → Catalog:

## Navigation Text color in color scheme

Set a different color for the text in the navigation bar.

From content tab → Branding (new):

## Add a background for the profile page

From content tab → Design (new):

Upload the background from the information → files → Paste the URL

## Consistent Border Radius for Buttons:

Updated UI elements:

1. Alert modal - buttons and container
2. Enter code modal - container
3. Pay in store modal - container
4. Qr code modal - container
5. Tile - image
6. Carousel Widget - elements
7. Point shop widget - wrapper
8. Profile widget - wrapper and right icon, sign in button
9. Welcome messages widget - wrapper in case if `config.fullWidth === 'stretchToDefaultWidget'`
10. Category item square - wrapper and image
11. Category item full screen - wrapper and image
12. Point Shop Catalog Item - wrapper and image
13. Gallery elements (point shop, gift shop) - wrapper, image, button.
14. Referral code block - referral box
15. Inbox message - button
16. Purchase history - no elements button

## Option to disable the coloring of header icons

The colors in the header are recolored based on the color scheme 'header text'.

This new capability allow you to use colorful icons in the header.

From Content tab → Branding (New) → Design (NEW)-

'Header Icons - Use Header Text Color (Default On)'

## Allow hiding widgets from Non-Members/Member

For each home screen widget added a new config called "Who can view it?" with the following options:

1. All users (default behavior)
2. Members Only
3. Non-Members only

Which enables you to decide who will see what on the home screen.

\*This setup is added to all home widgets.

From content tab → Home screen (new):

## Welcome messages catered to Non-Members and Members

- In case you would like to show welcome messages to non-members only - add the following tag `##_NON_MEMBERS_ONLY##_`
- In case you setup 'Restrict access only to members?' to true - then the tag will have no effect.

**Welcome Messages**

Title

Subscription

Restrict access only to members? (12 / 30)

Yes

Location visibility

Publish

Type and press Enter

##\_NON\_MEMBERS\_ONLY##\_ (tags\_placeholder)

Button Action

Open Web View

Choose a Web View:

Subscription

Save

## PNG supports transparent background

A new capability when uploading a transparent PNG image, it supports a transparent background and doesn't take the background color from the color scheme.

## A more compact tile widget with up-to 5 icons

Add up to 5 icons to the tile widget

## Purchase history

New native screen for purchase history.

From the layout blocks screen select "Open App screen" -->"Purchase history" in the layout blocks screen.

## Bug Fix

- Welcome Message visibility by tag functionality not working - [1221833559](#) - regression from 1.8.6 Member can see welcome message without matching tag.
- Accessibility additions - [CNP-18815](#) :
  - \* Loader indicator for webview - a text reader was added to indicate that the page is loading and when page finishes loading.
- Deactivated gifts displayed in active list - [1184587655](#)
- Profile widget - when no image in profile widget - there is still extra space in the widget - [CNP-18818](#)
- Link submitted through external event not clickable - [1159661596](#)
- Tile widget - when less than 3 items text can get distorted.
- App: Remove extra whitespace when Profile Image, Name and ID are not enabled in Profile Widget - [1069011527](#)
- Issue with the image size set on a layout - [CNP-18803](#)
- New Purchase history screen - font issue + missing text when no purchases - [CNP-18814](#)
- Catalog not Opening in App - [1091057042](#)
- Different catalog widget display between android and IOS - [1111538389](#)
- Inbox page - text with links is not clickable - [1081978170](#)
- Gift valid from date missing in app - [1115300638](#)
